#### **DETAILED ACTION**

### Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States
- 2. Claims 1, 3-11 are rejected under U.S.C. 102(b) as being anticipated by Petry et al. (5175976).

Petry et al. disclose a system for packaging products, comprising a series of carriers (conveyor 4, fig. 1) each adapted to receive at least one product therein (see fig. 1), an inserter unit (10, fig. 1) that receives and moves the carriers in spaced series along a path of travel for packaging, and which includes a series of inserter assemblies (see fig. 2) adapted to engage and urge the products out of the carriers, and a carton transport conveyor (carton conveyor 2, see fig. 1) moving a series of cartons (1, fig. 1) in timed relationship with the movement of the carriers along their path of travel such that the products are received within the cartons as the products are urged out of the carriers by the inserter assemblies, and a funnel conveyor (7, fig. 1) positioned between the inserter unit (10) and the carton transport conveyor (2) and having a series of funnels (5, 6, fig. 1) mounted there along for guiding groups of the products into the cartons of the carton transport conveyor, which meets all the claimed limitations.

Regarding claim 3, the carton conveyor includes a series of spaced carton locator device (see fig. 1).

Art Unit: 3721

Regarding claim 4, the carriers (14) are loaded with the products (see fig. 1) and are conveyed to the inserter unit.

Regarding claim 5, the inserter unit includes a guide track (see fig. 2) to be engaged by the carriers as they move along their path of travel for merging the carriers into a single line of carriers moving through the inserter unit.

Regarding claim 7, the inserter assemblies (10) each comprises an inserter rod slideably mounted to a support and moveable from at retracted, non-engaging position into an extended, engaging position for urging the products out of their carriers (see fig. 2).

Regarding claim 8, a cam follower (see fig. 2) mounted to each inserter rod and engaging a cam track (not shown) for moving each inserter rod between its engaging and non- engaging positions.

Regarding claim 10, a carrier conveyor (2) having loading station (see fig. 1) at an upstream end, wherein a series of products from at least one product transport line are received and loaded into each carrier.

# Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 9 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over Petry et al. (5175976) in view of Tisma (5388389).

Art Unit: 3721

Petry et al. disclose that each carrier comprises a pair of opposed sidewalls (13, 14, fig. 1) except for these side plates are pivotable towards an open position for receiving products therein. However, Tisma teaches a carrier (mandrel-14, fig. 6) having two opposed side walls (14a, 14b, fig. 6), which are slidably attached so as to slide toward an open position for receiving the products (see col. 6, lines 36-40) so that the Therefore, drop of product does not have to be a too accurate. There for It would have been obvious to one having ordinary skill in the art at the time the invention was made to having provided slidably attached opposed sidewalls of carrier of Petry et al. as taught by Tisma so as to slide toward an open position for receiving the products so that the drop of product does not have to be a too accurate.

Regarding claim 11, Petry et al., as mentioned above, disclose all the claimed limitations, except for multiple product transport lines. However, Trisma teaches multiple product transport lines (26, fig. 1) to load the products into the carrier (12, see col. 3, lines 43-44). Therefore it would have been obvious to one having ordinary skill in the art at the time the invention was made to having provided multiple product transport lines as taught by Trisma in the system for packaging products of Petry et al. to load the products into each carrier.

## Allowable Subject Matter

5. Claims 12-20, 23-26, 28 and 29 are allowed.

### Response to Arguments

6. Applicant's arguments with respect to claims 1-11 have been considered but are moot in view of the new ground(s) of rejection.

Art Unit: 3721

#### Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

8. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Greenwell et al. (6202392) also disclose a series of carriers, an inserter unit, a carton transport conveyor and a funnel conveyor positioned between the inserter unit and the carton transport conveyor.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hemant M Desai whose telephone number is (703) 308-5830. The examiner can normally be reached on 7:00 AM-5: 30 PM, Mon-Thurs..

Art Unit: 3721

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi I. Rada can be reached on (703) 308-2187. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
